CYBER CRIME ANALYSIS TOOL

Are you ready for the next wave of mobile data analytics?

Mobile technology has changed the world. There are billions of active mobile devices around the world today. These days people use mobile phones for everything and everywhere, be it a thriving metropolis, a small city or the remote countryside. Unfortunately, this is also true for people who break the law.

Thankfully, mobile technology leaves a fair amount of digital foot-prints. This trail of digital data can reveal a hidden world, an obscure world ever so often, but a world that points to the truth. It's our mission to help our clients search for and find that truth, in order to make our world a better and a safer place.

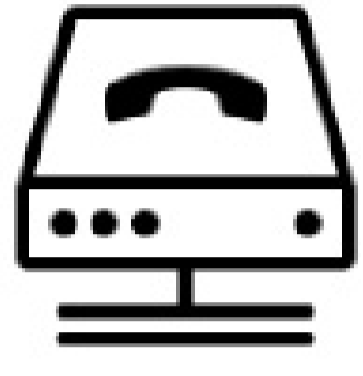

The evolution of encrypted communication through internet app to app calling like WhatsApp, Telegram, Signal etc. has led criminals to engage in suspicious activities unidentified by Law Enforcement Agencies.

With modern advancements, conventional analysis methods are ineffective in producing actionable insights. For law enforcement agencies, this means virtually impossible challenges and dead-end cases.

But not anymore, for the first time in India, introducing C5 CCAT with the power of digital intelligence, an innovative tool designed by Prosoft for next gen IPDR analysis. A dedicated team of data engineers at Prosoft have come up with a radical product, built from the ground up with IPDR analysis in mind.

We have designed and built a solution that analyses mobile IP metadata and not only confidently identifies B-Party in IPDR, but also builds a Cyber Profile of the criminal. This is a ground breaking solution that we've developed leveraging our profound domain expertise and over a decade's worth of analytical experience.

Innovative Key Features

PINPOINTING INTERNET APP TO APP CALLS IN IPDR

IPDR data received from the TSP is immense in volume. C5 CCAT swiftly filters out App to App calls (VoIP) for hassle-free investigations.

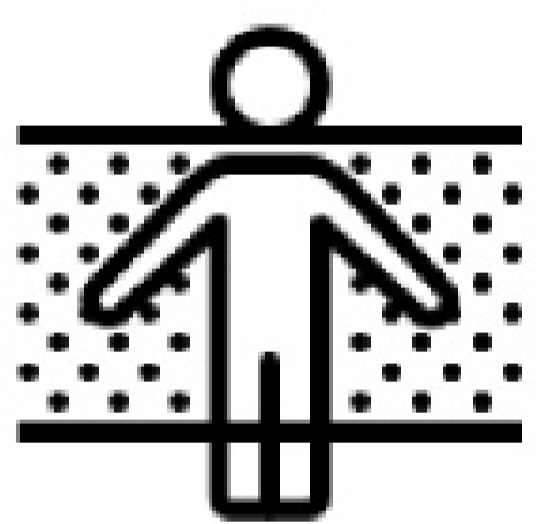

IDENTIFICATION OF CALLED PARTY IN APP CALLS

Guaranteed Identification of B-Party in internet app to app calls is what our solution is designed for. No more guess work, no more probable numbers.

COMMON NUMBERS IN IPDR

Discover insight about communication threads between individuals with ease.

UNCOVER SUSPECT CONNECTIONS

With C5 CCAT's intelligent data processing, uncover suspect connections with just IPDR data without the need for 2nd sheet.

An Intelligent Tool just perfect for the modern era of smart policing
